Lab 1 – Use-Case Flow

Use Case: UC-01 – Create Order

Primary Actor: E-Store Owner

Supporting Actor: Supplier Partner

System: Dropshipping Inventory & Order Orchestrator

Trigger: The E-Store Owner submits a new customer order for fulfillment.

Precondition: The owner is able to access the system and the requested product is registered in the system.

Postcondition: A successful order has an order ID and is sent to the appropriate supplier.

1. Main Success Scenario

1 The E-Store Owner enters the customer order details, including the product and required quantity.
2 The system receives the order and checks that the required order information has been provided.
3 The system validates the order details.
4 The system checks the current inventory information for the requested product.
5 The system confirms that enough inventory is available to fulfill the order.
6 The system creates the order and generates a unique order ID.
7 The system selects the appropriate Supplier Partner for the order.
8 The system forwards the order details to the Supplier Partner.
9 The system records the order status as submitted/forwarded.
10 The system notifies the E-Store Owner that the order was successfully submitted.

2. Alternate Flow A – Insufficient Inventory

A1 At step 4, the system checks the product inventory.
A2 The available quantity is less than the quantity requested in the order.
A3 The system informs the E-Store Owner that the product is not available in the required quantity.
A4 The system does not forward the order to the Supplier Partner.
A5 The order remains pending or is cancelled, depending on the owner's decision.

3. Alternate Flow B – Invalid Order Information

B1 At step 3, the system finds that required order information is missing or invalid.
B2 The system displays an error message and identifies the information that needs to be corrected.
B3 The E-Store Owner corrects the order information and submits the order again.
B4 The system continues from step 3 of the Main Success Scenario.

Result: The use case ends when the order has been successfully forwarded to the supplier, or when the order cannot proceed because of invalid information or insufficient inventory.
